

Safety Net Type S on the roof, is a type of collective safety net, certified according to the UNE EN-1263-1 and UNE EN 1263.2 standards, which enables fall arrest.

Although this is an example of a Type S Safety Netting System on roofs, this type of safety netting is often used on construction sites such as industrial buildings, bridges and viaducts, horizontal openings, etc.

The Type S Safety System is a fall arrest system that is mainly installed for the installation of metal roofs in the construction of industrial buildings.

At **VisorNets** we are specialists in the manufacture of **Type S Security Systems**. Contact us, we will be happy to advise you.
